

Adding files to an Electure

To add Files to an Electure they first have to be uploaded to the portal, see [Uploading files](#) . When the files are correctly uploaded you can proceed and edit the electure where you want to add this file.

Klick on „Manage Files“ [Manage Files](#) and then on „add file“ [Add file](#) to proceed to the following form:

Add/Edit file

- 1

Please choose a Filetypeconfiguration from the list and click on the button.

filetypeconfiguration

▼

Set
- 2

Please choose a file and then submit the form.

filename
No files found for this selection of filetypeconfiguration or no filetypeconfiguration selected yet.

Continue

Form to add File to an Electure

1. First select a filetype from the list of filetypeconfigurations and click on „set“.
2. Then select a File from the proposed list of files.
3. Additionally you can set the permissions for this file. The default permissions (inherited from the Filetypeconfiguration) should be ok.

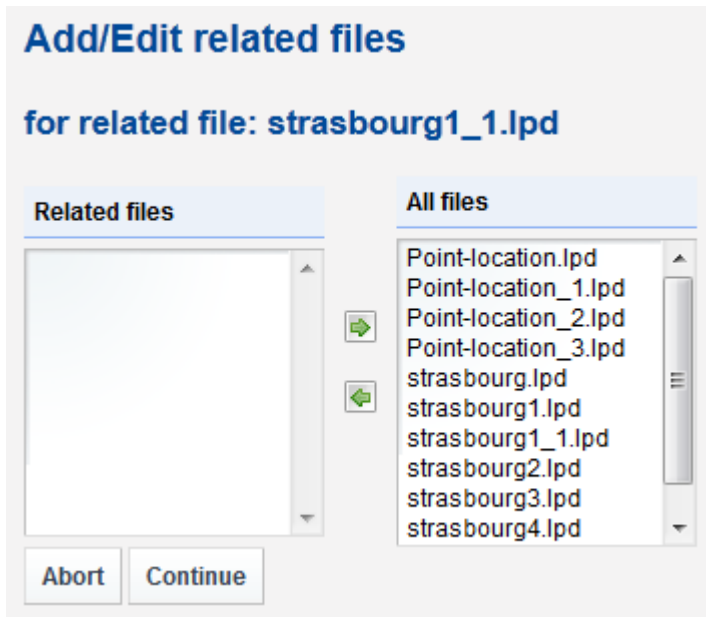

Then click on continue to add your file. You can only add one file of each filetype to an electure. If you have different PDF-Files to add (e.g. pdf, 4 pages on one, 6 pages on one, annotated pdf etc.), make sure you add different filetypeconfigurations for every type to the modul. To add another file of the same filetype, you have to create a new electure.

Adding/Managing Related Files

since 0.2

Related files are needed when one wants to use for example flash files that have one controler file, that requests additional files from the server. Since no Files can be accessed directly from the filesystem this fails without using Related Files.

To add a related file, go to the Manage Files tab [Manage Files](#) and then click on the add related files icon  in the icons list    of a file. You will be presented a two-sided list with files in the right part. Those are the files in the same directory or inside directories below the chosen file. Add the necessary files to the related files list as shown in the next screenshot, then click on Continue.

Form to add Related Files to a File

The icons list should now show a different icon  to indicate that there are related files assigned to this file. By clicking on this icon you can change the list of related files.
