Adding or Editing a Chapter

Adding new Chapters

To add a new Chapter, select you modul on the main page (ElecturesLibrary) and click on the modul name. Then click on the plus-sign next to the first navigation element. You will be presented the form below:

Form to add a new Chapter.

Type in the title of the new Chapter and click on continue. Additionally you can set the permissions for this Chapter, but the default permissions (inherited from modul) should already be appropriate.

Moving, Editing and Deleting a Chapter

Next to the chapter you will see a lot of icons. These enable you to add a new subchapter (plus-sign), to delete a chapter , to edit a chapter or to move a chapter . You can only delete a Chapter if it doesn't contain any references to electures. The arrows for moving a chapter allow you to make a chapter to a subchapter (right-arrow) or to move it one level up (left-arrow), to move the chapter up on the same level (up-arrow) or to move it down (down-arrow). Not all of these are available all the time, they are only usable when they are active (green).
